NSE Advance – Decline Ratio

Technical View – NIFTY (25,088.40)

NIFTY [N59901]25088.40, 1.06%

Price Avg(E,20) Avg(E,50)

Observations

- Commencing this week, NIFTY50 opened at 24,796.50, marking a high of 25,108.10 and closing for the day by rising 1.06% at 25,088.40. POWERGRID popped up as the top gainer for the index after the stock jumped more than 7% after firm raises FY26 capex guidance to Rs. 32,000 crores. Additionally, the long overdue India-US trade deal was announced late at night which is expected to provide massive boost to NIFTY's performance and remove some of the pressure the Indian equities were under.
- NIFTY50 took shape of a bullish candlestick with minor upper shadow and longer lower shadow signalling positive bias with the index still below the 20,50,100,200-day EMAs and the middle Bollinger Band. Weakness in the MACD histogram has weakened to -40.57 but the MACD line is yet to cross the Signal line. RSI at 39.20 has depicted a bullish crossover as it has now crossed the reference line from below it. In conclusion, mild momentum shown by the indicators combined with a positive price movement in Monday's session can support the bulls today along with the strong buying interest expected due to the trade deal.
- Looking at the levels, it appears that 25551 is performing as a significant resistance level for the Nifty. On the higher side, though, 25173/25224/25387 levels will act as a resistance area for the NIFTY. If we look at the lower side, support is located at 24744/24694/24530 and 24366 levels.

20 – Days EMA	50 – Days EMA	100 – Days EMA	200 – Days EMA
25439.63	25640.29	25545.9	25164.53

Technical View – BANK NIFTY (58,619.00)

BANKNIFTY [N59906] 58619.00, 0.35%
 Price Avg(E,20) Avg(E,50)

Observations.

- Stepping into a new trading week, BANKNIFTY started trading at 58,239.30, moving for a high of 58,687.05 and a low of 57,829.85. The index stopped trading by gaining 0.35% for the day and closed at 58,619.00. Although in previous day's session PSU banks weighed down due to Budget disappointments the stocks managed to stage a recovery and gained 0.87% providing support to BANKNIFTY's performance.
- Almost alike to the NIFTY50's candlestick, BANKNIFTY formed a bullish candlestick with an upper shadow but a lengthy lower shadows suggesting buying interest at lower levels with the index underneath the 20,50-day EMAs and the middle Bollinger Band. MACD histogram has severely weakened to -101.58 as the MACD line trades way beneath the Signal line. RSI at 43.34 has not yet managed to surpass the reference line. Overall, the longer term structure for the index remains positive in nature despite the index falling under the recent selling pressure and trading below the shorter EMAs with weakening momentum. Moreover, BANKNIFTY is also expected to lift up in today's trading session in agreement with the positive broader market sentiment after the India-US trade deal announcement.
- Collectively, these factors reinforce a constructive outlook for the index in the near term. Looking at the levels, it appears that 58807 is performing as a significant resistance level for the Nifty. On the higher side, though, 58908/59236/59563 levels will act as a resistance area for the NIFTY. If we look at the lower side, support is located at 57950/57849/57521 and 57194 levels.
