## Major Event of the Week

- **India's industrial production** jumped 7.9% YoY in Dec 2025, the fastest since Oct 2023 and above expectations, driven by strong manufacturing (+8.1%), with mining and power output also improving, easing slowdown concerns despite global tariff pressures.
- **The Fed held rates steady** at 3.5%–3.75% in January, noting a resilient economy and easing labour pressures while staying cautious on inflation and future moves.
- **The US trade deficit jumped to a four-month high** of \$56.8 bn in Nov'25, driven by a sharp rise in imports and weaker exports amid volatile tariff policies, with wider gaps seen with China, Vietnam and the EU.
- **US jobless claims edged down to 209,000**, while continuing claims fell to a near 16-month low, signalling a stable, low-hiring labour market consistent with the Fed's view of easing labour demand.
- **Japan's unemployment rate stayed at 2.6% in Dec'25**, the highest since mid-2024, as employment and labour force shrank, though the jobs-to-applicants ratio edged up to 1.19, signalling slightly improving job availability.
- **India and the EU sealed a landmark free trade agreement after nearly 20 years**, covering a two-billion-plus market and boosting trade, market access, and strategic ties amid shifting global trade dynamics.
- **Gold and silver hit record highs**, with gold at ₹1,80,779 per 10g and silver at ₹4,20,048 per kg, driven by escalating geopolitical tensions and safe-haven demand.
